

# CWRS-90-UV Recirculation System

Pretreatment Recirculation System with Temperature Control and UV

The CWRS-90-UV recirculation system incorporates ultraviolet sterilizers and heat exchangers in 316ss as a means of effective microbial control within the pretreatment system. This degree of control is a crucial part of a USP purified water system and will contribute to trouble free validation. The system is sized according to the specific requirements of the water treatment system for which it is built.

We Use Quality Components From:

- 316 Stainless Steel Pumps.
- 316 Stainless Steel Heat Exchanger to inhibit microbial incubation.
- Ultraviolet System with Monitor.
- Stainless steel structure for lasting appearance and durability.
- Control Panel in NEMA 4X Enclosure.
